

Amateur Radio Club

Now in its fourth year, the **Saint Ann School Amateur Radio Club** offers students a unique opportunity to explore the world of communication, science, and technology through amateur, or “ham,” radio. Amateur radio is a globally recognized hobby and service that allows licensed operators to communicate over radio frequencies with others locally, nationally, and even internationally. It fosters curiosity in electronics, geography, and global communication while promoting teamwork and problem-solving skills.

The Saint Ann School Amateur Radio Club has achieved exceptional success since its founding. The club has been named the **ARRL School Club Roundup (SCR) Elementary School National Champion** twice and has consistently placed **within the top three nationally** in all five years of participation.

This program continues to be one of our most popular extracurricular offerings, providing students with hands-on experiences that inspire interest in STEM fields and strengthen communication skills in a dynamic, real-world setting.
